

FOUNDER NOTES

5 lessons from 6 years building in ecommerce.

From a founder building the AI operating system for online stores.

ABBAS ZEIN / FOUNDER & CEO, AUTOMMERCE

SWIPE →

LESSON 01

Your catalog is your storefront.

Every missing title, thin description and wrong attribute is a shopper who never finds the product. Clean data comes first.

LESSON 02

Hiring more people is not a scaling plan.

If your catalog doubles and your data-entry team has to double with it, the model is broken. Automate the repeatable work.

LESSON 03

Shoppers buy what they can picture on themselves.

That is why we built Persona: a virtual fitting room and AI stylist that lives inside the store.

LESSON 04

Images are data, not decoration.

Classify them, enrich them, tie them to the product. Search engines and AI assistants read them too.

LESSON 05

Put AI in the back office first.

The wins that compound are the quiet ones: catalog, images, and assistants that already know your products.

SO I AM BUILDING AUTOMMERCE

One AI operating system. Not ten tools.

Catalog Intelligence
Image Classification
Product Gallery
Product Visualizer
Growth Engine
Store Assistant
Website Restructurer

NEXT STEP

Let's fix your back office.

Book a meeting and see Autommerce on your own store.
