

FOUNDER NOTES

# 5 lessons from 6 years building in ecommerce.

From a founder building the AI operating system for online stores.

**ABBAS ZEIN** / FOUNDER & CEO, AUTOMMERCE

LESSON 01 / 05

# Your catalog is your storefront.

Every missing title, thin description and wrong attribute is a shopper who never finds the product. Clean data comes first.

LESSON 02 / 05

# Hiring more people is not a scaling plan.

If your catalog doubles and your data-entry team has to double with it, the model is broken. Automate the repeatable work.

SWIPE →

LESSON 03 / 05

# Shoppers buy what they can picture on themselves.

That is why we built Persona: a virtual fitting room and AI stylist that lives inside the store.

LESSON 04 / 05

# Images are data, not decoration.

Classify them, enrich them, tie them to the product. Search engines and AI assistants read them too.

LESSON 05 / 05

# Put AI in the back office first.

The wins that compound are the quiet ones: catalog, images, and assistants that already know your products.

SO I AM BUILDING AUTOMMERCE

# One AI operating system.
# Not ten tools.

Catalog Intelligence
Image Classification
Products Gallery
Products Visualizer
Growth Engine
Store Assistant
Website Restructure

NEXT STEP

# Let's fix your back office.

Book a meeting and see Autommerce on your own store.
